IN THE SPECIFICATION

Please add the following immediately following the title on page 1 of the application:

--Related Applications

The present application contains subject matter similar to that disclosed in U.S. Application Serial No. 09/821,190 filed March 29, 2001 and in U.S. Application Serial No. 09/821,191 filed March 29, 2001.--

Please amend the paragraph at page 17, line 21 as follows:

--Thus, as shown in Figure 6, when the notifier 82 is activated, the note 22 is made to appear in a predetermined portion of the screen display 84 which happens to be partially occupied by a window 92. Accordingly, the window 92 is burned so that a border 94 is provided around the note 22. The border 94 allows whatever is in a layer below the window 92 to be seen through the border 94 around the note 22. Thus, the note 22 burns through the window 92 to expose a portion of the layer below the window 92.--

Please amend the paragraph at page 18, line 18 as follows:

--If there is no active session as determined by the block ~~80~~ 88, or after a burn through is provided by the block 90, a block 98 causes the newly posted content of interest to be displayed within the burn through on the display of the content recipient's network enabled device. Thus, as shown in Figure 6, the note 22 is displayed within the burn through portion of the window 92. Thereafter, a block 100 determines whether an attachment location is identified such as by the content recipient. If an attachment location is identified, the received content is attached to the identified location at a block 102.--
